

# See the forest from the trees

*(or anywhere you like)*

Discover a clear view of your network with Kinetic Design. We specialise in network design and providing secure solutions to deliver maximum performance from your hardware. Armed with a fully featured network, your business will operate smoothly and efficiently. If you want more from your network, Kinetic is ready to help you.

## High Performance Networks

It is surprising that many modern computer's network capabilities easily exceed that of their attached infrastructure performance. This inefficiency is costing your company.

Our efficient network design delivers optimised solutions to unlock the true potential of your hardware. We ensure that your network makes full use of available bandwidth.

## Network Service Integration

If your business hosts require specific network services. Kinetic have years of experience this often confusing area. We can translate this to human friendly concepts to help you with a cost effective solution. We implement and support a wide variety of network services, including but not limited to file sharing, email services, shared calendars, FTP, web, filtering, fax and VPN servers.

We specialise in open source solutions where possible and this can reduce ongoing server costs significantly.

## Virtualisation

With little fanfare, virtualisation has been one of the greatest advances in enterprise computing. It facilitates the ability to run multiple 'virtual servers' on one physical server. Until recent advances in CPU technology, virtualisation was beyond the reach of many businesses. However, that has all changed...

Virtualisation offers many advantages over traditional systems. Primarily infrastructure investment costs and operating costs are reduced, hardware utilisation is increased, system scalability is increased and adding system resources can be allocated quickly and easily.

Seamless migration to new hardware with portable virtual servers has huge advantages over traditional methods. It is no coincidence that forward thinking companies have rapidly adopted this impressive technology.

## Self Managed Networks

Traditionally, network operation is bestowed to IT staff, which can be an unnecessary expense. We can assist you to keep your IT costs down, with a range of self managed solutions.

Managing email users, blocking websites or reports on internet usage - it is in your hands. Not only does this reduce costs, it can also highlight potential inefficiencies in your office, with total transparency.

## Mobile Devices & Remote Access

Clients expect fast response time. Remaining 'connected' to your base network is a critical part of business and Kinetic Design have the solutions, so you will be able to do just that.

We provide VPN network access while on the road, synced email on mobile devices, secure multi-office network links and hosted data-centre solutions. Gain access to edit, print and even use programs that are installed on your base network. We will keep you securely 'connected' when and where you need it most.

## Scalability & Network Upgrades

Expanding network resources doesn't have to be a revolution. Our solutions are designed for scalability with a clear strategy for future upgrades. We believe that

networks should evolve and grow with your business.

If your business is considering upgrading your network, we offer complete design and deployment services. Every business is different and every business has different IT requirements. We engage with you to discover your requirements and only after careful analysis and consideration recommend solutions.

## Security

Today, you have to be 'connected' to survive. With all the advantages being online, it also brings security threats and a firewall is simply not enough.

Kinetic implement solutions stopping threats before they enter your network. Filtering email content is not enough. You need policies for filtering all internet traffic. We can secure your network based on protocols, content and filter inappropriate sites to protect you and your staff.

## Backup Solutions

The thought of a server hard drive failure, can send a shiver up the spine of most business managers. At Kinetic, in systems we deploy, we ensure at least one level of data redundancy, so the chance of data loss or failure is immediately reduced.

How important is your accounts & sales data or email? If you have backup, well done, many businesses don't. Kinetic customise backup systems that provide automated incremental backups to high capacity data stores. However, even the best onsite backup system, can not protect you again fire or theft.

Offsite backup ensures your critical data and servers can be restored in the event of a natural disaster, accidental error or system crash. Even better it's automatic, every night whilst you're sleeping your important data is securely backed up to a remote location.

In the event of a failure, we can even host your critical systems to get you back up and running as fast as possible... business as usual.

## Carbon Footprint Reduction

Like most things in life, there are many ways to achieve the same result. Kinetic's highly efficient virtualisation solutions, can help your business and the environment.

Reducing physical servers in your business, can significantly reduce power consumption, not to mention manufacturing resources. Remote access can also reduce travel. So why not think smart with new green networks.

Case studies detailing effects of green networks will be available soon for download from our website.

## Support for Networks

Kinetic Design provide network support of small to medium sized businesses. We specialise in supporting networks and solutions that we have designed and offer onsite and remote support.

We have a wide range of experience in supporting all the major systems including Linux, Windows and Macintosh systems.

Contact our friendly staff to discover how we can make your network better, faster and more secure.
